Title: Script 1 | Has the Battery Taken Over F1? - Why have drivers become 'passengers' to robots in 2026?

Source: Idea 1 (FIA / Josh Suttill & Jon Noble)
Tone: Curious, humorous, and explanatory

Time	Visual / Scene	Audio / Speech
00-05s	[Hook] Presenter looking frustrated at a video game controller.	Have you ever felt like the video game is playing for you? Well, that's exactly how Oscar Piastri feels in F1 in 2026!
05-25s	Images of the McLaren car in race pace cutting to battery telemetry graphics.	The drivers are furious because algorithms are deciding when the car delivers electric power. The burning question: why not let the driver control 100% of the KERS/battery manually?
25-45s	[Body] Quick animation of an F1 car dragging a giant battery or a clip of the FIA director.	The FIA responded: if they gave total freedom, drivers would burn the entire battery exiting Turn 1, and teams would have to build a battery the size of a truck! But relax: the FIA promised to recalibrate this engine from 50/50 to 60/40 by 2028.
45-60s	[CTA] Presenter smiling at the camera.	What about you? Do you think F1 is turning into a computer coding festival? Comment below if you miss the roaring V10s!

05-25s	[Body] Images of Lawson overtaking in Monaco, Silverstone, and celebrating in the VCARB garage.	The New Zealander hit an absurd streak in the first half of 2026. Even with the VCARB 03 being a bit twitchy early on, he and rookie Arvid Lindblad clicked with the car and scored points in almost every race!
25-45s	[Conclusion] Lawson smiling in an interview and standings showing him P9 in the championship.	The goal for the rest of the year? Lawson sent a clear message: topple Alpine and ensure Racing Bulls is the 'best of the rest', right behind the big 4.

Time	Visual / Scene	Audio / Speech

05-25s	[Body] Historic photos of the 2003 McLaren MP4-18 and comparisons with the 2026 Aston Martin.	Aston Martin's rough start in 2026 is bringing flashbacks to the legendary 2003 McLaren MP4-18. Back then, Newey's car was so compact and radical that it simply overheated, caught fire in testing, and NEVER raced!
25-45s	[Conclusion] Images of McLaren dominating in 2005 and the new Honda engine arriving at Aston Martin.	But guess what? That 'failed' concept gave birth to the fastest car in the world in 2005. Now, with upgraded Honda engines arriving, Aston Martin might just be hiding their true pace.
45-60s	[CTA] Presenter looking suspicious.	Do you trust Newey to turn this Aston into a rocket? Leave your prediction in the comments!

05-25s	[Body] Williams car testing in Bahrain and Aston Martin struggling in the early rounds.	Williams couldn't even make it to the Shakedown in Barcelona, arrived in Bahrain with a car that was way too heavy, and plummeted to second-to-last place (P9)! And Aston Martin had a terrible start to the season, barely scoring any points.
25-45s	[Conclusion] Carlos Sainz/Albon looking thoughtful and new Aston parts showing results in Hungary.	The good news? Aston Martin started showing signs of life in Hungary with new packages, and Williams is promising a massive upgrade in Baku.
45-60s	[CTA] Presenter shrugging their shoulders.	Will Sainz and Albon dig themselves out of this slump by the end of the year? What do you think?
